Subject: RE: New Indy steam stripper

Stripper returned to service slowly overnight into today. To be determined, but we estimate 450 gpm to the stripper and remainder to the hardpipe for treatment in the ASB. I will gladly provide you an update as we finetune the operation. Remember, unit hasn't run since late August 2020.

Dan,

Thank you for the information.

I heard DHEC has provided you approval to re-start the steam stripper. When does the facility plan to start up the steam stripper? Also, what will be the flow rate to the ASB from the condensate tank once the steam stripper is operating?

Denis

Subject: RE: New Indy steam stripper

Using a 12 month average prior from May 2019-May 2020, the average flow to the stripper was 430 gpm and the flow to the ASB through the hardpipe was 90 gpm.

Dan,

I hope you are having a good day. I had a follow up question about our conversation we had on Monday morning. It is my understanding and correct me if I am wrong, that prior to September 2020, all the foul condensate was collected in the steam stripper feed tank (foul condensate tank). From the steam stripper feed tank about 400 gallons/minute was sent to the steam stripper. What was the flow rate from the foul condensate tank to the aeration stabilization basin prior to September 2020?

Let me know if you have any questions.

Thanks,

Denis
